

Instructions for Making the

Fsl 3d Eggs

These free standing lace egg designs will fit in a 4 x 4 embroidery hoop. Using two layers of water solvent stabilizer pick out a top and bottom egg in the same color design to stitch out. Example shown below: After stitching design of your choice, rinse out stabilizer and lay flat to dry. To assemble the two parts, first make sure your slits are open all of the way. I just run my scissors very gently thru the slits. Slide the bottom egg thru the top slit. Then run a ribbon thru the little hole. Example is below.

Happy stitching
