

POTW – Horizon Landscapes

by Marlene Stewart

Supplies:

- Clear water soluble [stabilizer](#)
- Nylon netting or similar fabric
- Cord
- Beads (Large enough hole for cord to go through)
- Clear vinyl found in fabric stores (used for covering upholstery, books, etc.)

Instructions:

[Hoop](#) 2 layers of nylon netting on top of clear [stabilizer](#).

Stitch design, stopping before the first border. Take [hoop](#) out of [machine](#) and attach two pieces of 4×4 clear vinyl with tape. One is secured under the [hoop](#) and the other on top of the design as shown here:

Place the [hoop](#) back in the [machine](#) and stitch the first single border, this will attach the vinyl to the design. Take the [hoop](#) out of the [machine](#) and trim off the vinyl on top and on the bottom along with the nylon netting as close to the border as possible. Do not cut the [stabilizer](#) – this will hold the design to the [hoop](#) and remain as part of the design.

Place the [hoop](#) back into the [machine](#) and complete the design. Punch out the design carefully using your fingertip to hold the [satin stitch](#) while pulling up from the bottom as shown here:

Poke the hole in the top of the design with tweezers or a large sharp needle. Run the cord through the hole and pull the cord through the bead as shown here:

Hint: I used a different colors for the single tack down, zigzag and [satin stitch](#) for your convenience so that you can see when to trim around the design. You can use the same color as the final [satin stitch](#) for all three of these.
