

## Guidelines for embroidering design FSL Daffodils

Using this design you can create earrings, a ring, a pendant, a hair clip or a brooch.

You can find two versions of the daffodils in the file folder, with a larger middle or a smaller one. On my pics the earrings are embroidered with a large middle (file IB 390), but you can choose according to your taste. If you want the middle to be smaller embroider the file IB390-1. One file is one earring.

1. Put a dense water-soluble stabilizer into the hoop (if your stabilizer is not dense enough, use two layers of stabilizer)  
The stabilizer should be well stretched in the hoop, should not have waves and folds, and should be quite dense.
2. The lower thread should be of the same color as the upper one to get a beautiful embroidery result
3. Embroider the design

4. Remove the embroidery from the hoop, cut the excess stabilizer off, wash the stabilizer out

5. Dry and shape the petals (no need to make them very straight, it is better to form small curves, then you will get a more natural look after drying)

Usually, after washing out the stabilizer in very warm water, the petals acquire natural curves, slightly bending. Try to maintain this look, help a little to form more natural curves with your hands. Do not wash the stabilizer too much, so that the earrings hold their shape after drying and remain "starched".

6. Sew the flower details. Decorate the middle of the flowers with beads. Then you need to make holes with an awl and attach the connector and the seams. With this method of attaching the connector, you just push the stitches a little, so it is completely safe, and the embroidery will not unfold.

Enjoy the wonderful accessory!
