

Guidelines for embroidering design

FSL Water lily

The flower design is created using FSL (free-standing lace) technique.

Put a dense water-soluble stabilizer into the hoop (if your stabilizer is not dense enough, use two layers of stabilizer)

The stabilizer should be well stretched in the hoop, should not have waves and folds, and should be quite dense.

The lower thread should be of the same color as the upper one.

1. Embroider all parts of the design on a water-soluble stabilizer. For my water lily, I embroidered two parts of large petals, two blanks of small petals, a leaf and a stem.

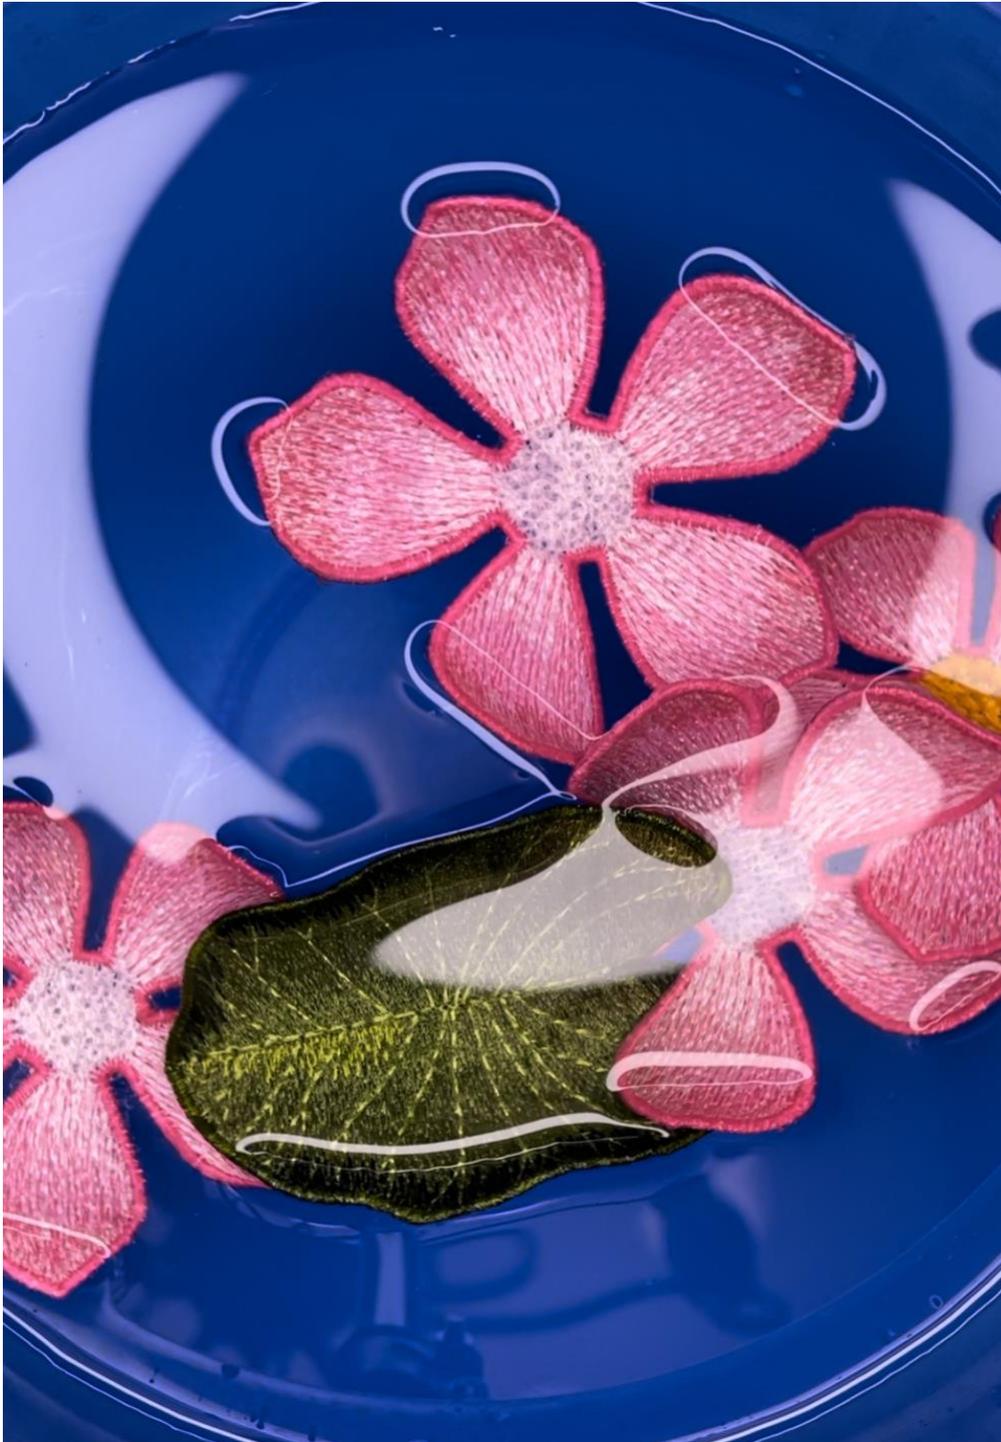

2. Remove the embroidery from the hoop, cut the excess stabilizer off, wash the stabilizer out.

3. After washing the details of the flower, give the petals and leaf natural curves and dry the details.

4. Assemble the flower, sewing all the details by hand. The middle of the flower or the leaf can be decorated with beads.
Depending on how you will use the flower (brooch, hairpin, headband decoration, etc.), fasten a lock, pin or other accessories.

5. In order for the leaf to be visible, sew a water lily flower to this place:

6. Fold the water lily stems as shown in the photo and fasten them under the sheet (the stems can be sewn or glued with a glue gun under the fastener)

Enjoy the wonderful accessory!
