

Embroider all designs of FSL flowers on two layers of a water-soluble stabilizer. If your water-soluble stabilizer has a high density, then you can embroider on one layer. The stabilizer should be well stretched in the hoop, not having waves on the surface. Use the bobbin thread of the same color as the top thread for a beautiful result.

This design is embroidered on water-soluble stabilizer. The stabilizer is washed, dried and petals are formed. Wash the stabilizer in very warm water, then the petals will take on natural curves. Do not straighten them, and dry in this form to get a more natural look of the flower. All parts of the flower are sewn by hand in the center. The middle of the flower can be decorated with beads or stars to your liking.

To create a flower you must embroider:

file IB62a - 1 time file

IB62b - 1 time file

IB62c1 - 2 times file

IB62c2 - 1 time
