

1. To get the best result, use a dense water-soluble stabilizer. If your water-soluble stabilizer is not dense enough, use two layers.
2. Embroider 14 small flowers and one detail with leaves.
3. Wash the water-soluble stabilizer and dry all the elements of the brooch

4. Sew all 14 flowers to the specified places

5. To make the sewing of flowers easier, you can skip the embroidery of the middle of the flowers (yellow in the design). And replace them with beads to your liking.
