

Guidelines for embroidering design FSL Alstroemeria

Using this design you can create a hair clip, a brooch or another accessory of your choice.

You can find two variants of the middles in the folder with the files, which differ in the presence of a decoration in the center. If you want to embroider the middle with beads use the center without embroidered balls.

1. Put a dense water-soluble stabilizer into the hoop (if your stabilizer is not dense enough, use two layers of stabilizer)
The stabilizer should be well stretched in the hoop, should not have waves and folds, and should be quite dense.
2. The lower thread should be of the same color as the upper one to get a beautiful embroidery result
3. Embroider the design

4. Remove the embroidery from the hoop, cut the excess stabilizer off, wash the stabilizer out

5. Dry and shape the petals (no need to make them very straight, it is better to form small curves, then you will get a more natural look after drying)

Usually, after washing out the stabilizer in very warm water, the petals acquire natural curves, slightly bending. Try to maintain this look, help a little to form more natural curves with your hands. Do not wash the stabilizer too much, so that the earrings hold their shape after drying and remain "starched".

6. Sew the flower details. Decorate the middle of the flowers with beads.

7. Fix the fastening for a brooch or a hairpin on the back side with a glue gun.

Enjoy the wonderful accessory!
