

Instructions

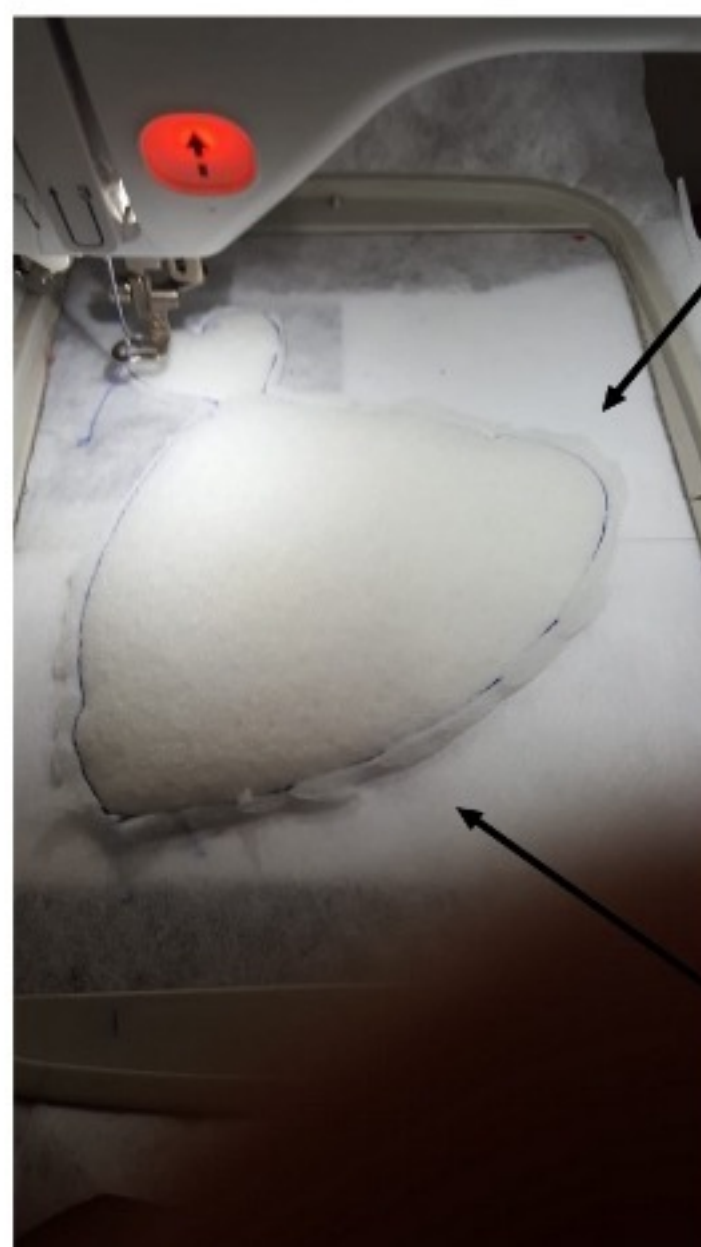

All my projects are done in the same way, the photos of this may not match, but the way of doing it is the same for all them.

The fabrics we use in these projects are: Felt which are the bases and different fabrics to the customer's taste.

Step 1: Place the stabilizer in the frame or fabric that is very light, make the first mark that the machine will present.

Step 2: Place the acrylic blanket over the frame marking, use the R2 blanket, sew the next step and cut off the excess embroidery border.

Step 3: Position the fabric, at that moment we use the felt that will be the base. I always choose white felt or skin color.

The felt you do not cut the excess.

Step 4: From now on, the machine steps will show the appliques that you will sew, you can use different fabrics according to your creativity.

Step 5: In the penultimate step of the machine, you will remove the frame from it and place the felt behind the frame to finish your pattern.

Okay, now just cut and it's over.

After sewing all parts of the project, you will paste and assemble your project according to the photo.

Thank you and good project
