

Free Standing Mylar Snowflakes

Supplies needed:

- Water-soluble Stabilizer (fabric type)
- Embroidery thread with the same color on your bobbin

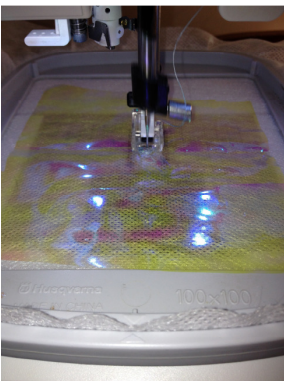

All designs will stitch in a 4x4 hoop

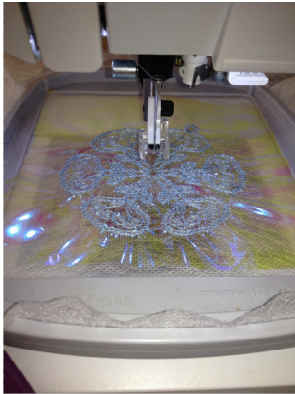

Hoop your Water-soluble stabilizer

Wind the same thread on your bobbin as you are using as your top thread

Place your mylar and let the stitching begin

Finished snowflake

Remove hoop from machine and carefully remove mylar around the design. For the little pieces I use tweezers and remove as much as I can while still in the hoop.

Cut the stabilizer close to the design

Soak the design in water to remove the water soluble stabilizer. After soaking, gently blot the excess moisture and lay flat to dry.

Once completely dry you can remove the little mylar pieces easy with a tweezers or clip it with some small clippers

And voila, your snowflake is ready to use either with a ribbon on your Christmas tree or you can hang them in your windows with some fishing line

Enjoy!!

Merry Christmas
